Before the installation check the following:

- [System Requirements](#)

Installing QuickFAQ is pretty straight forward:

- Navigate to the Joomla Installer and select the component package for installation.
- Navigate to the Joomla Installer and install the QuickFAQ Search Plugin if needed.
- Navigate to the Joomla Installer and install a QuickFAQ translation if needed.

After installing continue with the initial configuration:

- Enable the QuickFAQ Search Plugin if installed
- Create the folder, where files will moved to during upload. Default:
YOUR_JOOMLA_ROOT/components/com_quickfaq/upload or define another existing destination directory in the configuration.
- Adjust the configuration parameters to your needs.
- Create your Categories structure before typing in any FAQ Items.
- QuickFAQ needs at least one menuitem (type component) to work properly. Create a menuitem for QuickFAQ in the menumanager, pointing for example to the QuickFAQ view.
