System Requirements

- MySQL 4.x or later.
- PHP 4.3.x (PHP 5.2.x recommended)
- Browser: Firefox, IE 6/7, Opera.
- GD Library v2 (Optional but recommended)

Notes

- EventList requires Mootools (shipped with Joomla) to make the administrators life easier. Third party extensions using JQuery will interfere with EventList.
- EventList does require the getimagesize() function to be enabled.
- Except of the required MySQL version all system requirements are similar the [ones of Joomla!](#)

Make sure you match them also!

- Don't run Joomla or EventList on a server using the the following PHP versions: 4.3.9, 4.4.2, 5.0.4
