

Why does my change in the settings show no effect?

EventList stores several values of the settings ins the user session because of performance reasons. After you changed the settings you need to logout and login again. Now the changes you applied should take effekt. For more information about that read the settings helpscreen in the EventList Helpcenter.

This behaviour only affects EventList versions pre 0.9.2. With the release of EventList 0.9.2 the settings apply immediately.
