The EventList project is worked on voluntarily. That means we work on it when time allows and we have fun doing so. Because of this we only provide an incomplete list of targets we want to achieve. If you want to fasten this process feel free to join and help out.

The following features we plan to integrate in the upcoming versions of EventList:

- custom fields
- unlimited subcategories
- possibility to assign events to multiple categories
- simple plugin system

We are always open for suggestions and ideas. Don't hesitate to suggest your idea at our [wishlist tracker](#)

.
